LUDIX

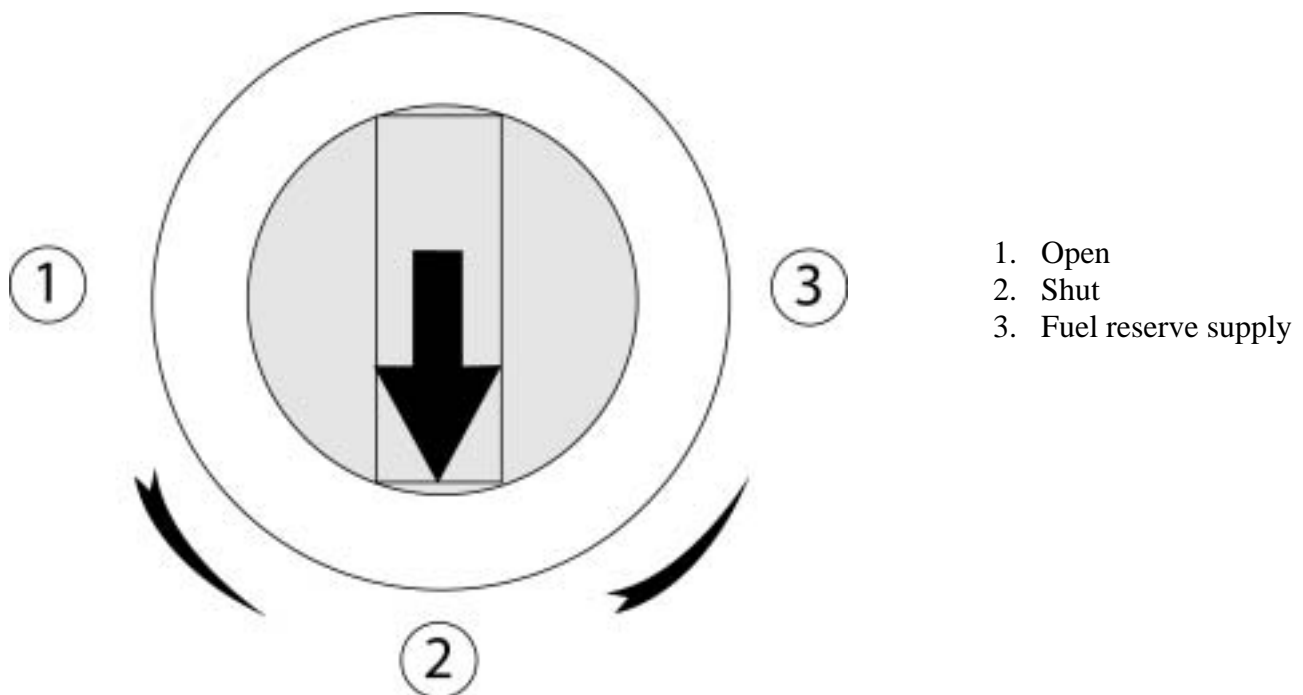

Subject: MANUAL FUEL TAP

As the Ludix is provided with a manual fuel tap here are a few precautionary tips on the use of this tap.

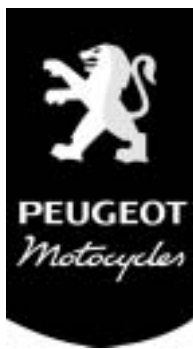

These precautionary tips are to be reminded to the customer when handing over the machine.

Operation of the fuel tap:

The first machines were provided with a tap whose operating principle is as follows:

	Dealership	Spare parts	Mechanic 1	Mechanic 2	Mechanic 3
Signature					

SERVICE INFORMATION

SALES DIVISION
NETWORK TECHNICAL INFORMATION

In order to make the tap's operating principle more logical, these taps have been modified so that they operate as follows:

1. Open
2. Shut
3. Fuel reserve supply

Precautionary measures with this type of fuel tap:

Do not run continually with the tap in the fuel reserve supply position otherwise the rider will not be warned in case his machine runs out of petrol. The fuel reserve supply position allows the rider to go to the nearest gas station to fill up the petrol tank.

Shut the fuel tap every time you stop the engine and park the machine.

The carburettor float needle is in no case a safety device.

Only the fuel tap can guarantee that the machine's fuel supply system is leak proof, when the engine is stopped and the machine parked.

The machine must absolutely be stored with the fuel tap in the shut position.
